

GRC Decorative 3D Tiles Installation Guide

Living Concrete GRC concrete panels can be used on inner walls cladding. The tiles must be fixed to a stable, sturdy, and rigid surface.

During the mounting, panels may be machined with the use of tools suitable for concrete cutting.

Invisible mounting system - gluing - with the use of back-expanding sleeve (ensures high strength of connections immediately after mounting).

- **gluing** (with polyurethane or dispersion glue for mounting panels on small surfaces)

Example of gluing with use of the polyurethane glue.

Gluing with dispersion glue

Invisible mounting system with use of the chemical anchor:

- **anchoring** (with chemical anchors - a sleeve is embedded in the inner surface of the panel; then an appropriate rod is inserted in each of them, chemical anchor is putted in the openings, and the panel is fixed)
