

## Maintenance of concrete Panels and Tiles

As with all natural products, stone tiles require a certain degree of care.

For the purpose of proper care and cleaning of Living Concrete products, do not use any aggressive cleaning agents or any other chemicals that are reactive to concrete or sealant.

Usage of solvents, abrasive agents (powders, creams), non – diluted or concentrated cleaning agents, and in particular colourful ones, is unacceptable.

Spots/dirt caused by substances with strong colour, such as a tea, coffe, red wine, curry or mustard, must be rinsed with water or wiped with a damp cloth as soon as possible.

Do not leave stains to dry, as they may permanently stain the surface.

Sweep or vacuum the surface regularly to remove all dirt and dust.

For the purpose of cleaning sealed concrete surfaces use a mild detergent and rinse with warm water.
